### Right Information Right Now!

To succeed in today's fiercely competitive business world it is vitally important for organizations to get corporate documentation on the Intranet fast. The result, however, is often an avalanche of unstructured and undisciplined content that rapidly becomes out of date.

To be effective, knowledge workers require the right information at the right level of detail, in the right context for their role, **right now!**

To meet these exacting requirements you need to implement a solution that addresses, not only end-to-end authoring and publishing, but also standards and structure for documentation.

PerformX™ and HTML Transit are the **right tools!**

### PerformX™ and HTML Transit

Systemik Solutions is Australia's premier consulting group in Intranet Documentation Publishing. The largest, most successful companies in Australia have implemented PerformX™ and HTML Transit to author, maintain and publish corporate documentation.

- ◆ **PerformX™** is an ideal template solution to propagate documentation standards and ensure the development and maintenance of consistent structured documents.
- ◆ **HTML Transit** is an industrial strength and lightning fast HTML conversion engine. Transit has become the industry standard for converting, publishing and posting long documents.

### Self Serve Solution

With these tools you can provide business content contributors with a 'self-serve' solution allowing them to publish high quality online documentation themselves. Documents prepared and maintained with PerformX™ Author go through the Transit publishing process perfectly.

The user is protected from the entire process; they simply drag and drop documents in a nominated network directory, HTML Transit automatically publishes HTML and posts to the site!

### PerformX™ and HTML Transit Modules

Modules can be purchased and implemented separately or as a comprehensive, scalable model for corporate documentation.

- ◆ **PerformX™ Designer** - configure templates for each category of business documentation.
- ◆ **PerformX™ Author** - build and maintain consistent, structured documents across the organization
- ◆ **HTML Transit** - instant publishing from Word to HTML and posting to the Intranet site.
- ◆ **Transit Central** - automated server side publishing whenever users update source in Word.

### Author Publish Post

Implementing an Intranet Documentation Publishing solution with PerformX™ and HTML Transit is phased and scalable.

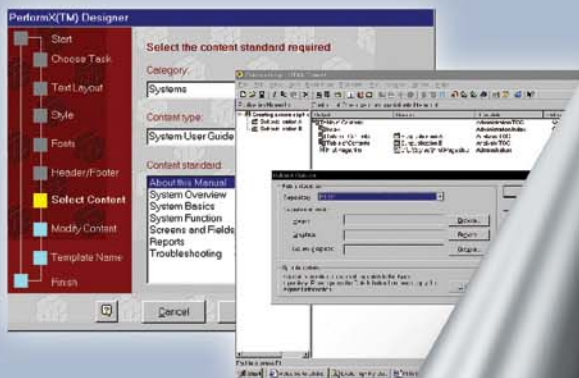

- 1 Author** Provide PerformX™ Author templates to business owners to build and maintain documentation.
- 2 Publish** Configure HTML Transit to corporate Intranet standards and automate publishing.
- 3 Post** Implement Transit Central to schedule publishing and posting as the implementation scales corporate wide.

### Right Tools Right Now!

PerformX™ propagates standards by providing authors with simple templates to build and maintain documentation themselves.

HTML Transit removes the publishing bottleneck by liberating the Intranet team from routine tasks without compromising corporate Intranet standards.

PerformX™ and HTML Transit are the right tools to populate the intranet with corporate documentation **right now!**

# PerformX™ HTML Transit

## Author

### Rapid Documentation Development

- Select the Author template for a particular content category.
- Accept the detailed content standard, or configure the optional elements for document specific requirements.
- Generate a new document; add text, tables, graphics, formatting and hypertext links with a standard toolbar.
- Save the document into the nominated Network directory ready for publishing and posting by HTML Transit.

## Publish

### Instant Conversion and Publishing

- Configure a project in HTML Transit that specifies the documents to be included in a particular collection.
- With Transit Central you can specify a directory so Authors can simply drag and drop to publish.
- Apply a Transit Template to customise output for corporate frameset, presentation, graphics and navigation.
- HTML Transit converts the source documents and publishes in HTML or XML.

## Post

### Automatic Scheduling and Posting

- When documents change you can update the site by merely pushing a button in HTML Transit.
- HTML Transit automatically posts the results to your site.
- HTML Transit templates can apply JavaScript or ASP and modify output for Intranet, Extranet and Internet.
- With Transit Central you can schedule updates to happen automatically, on an hourly, daily or weekly basis.
